

At Intel, we believe that corporate responsibility is simply good business. Doing the right things the right way creates value for Intel and strengthens our position as a global technology and business leader. Deeply embedding corporate responsibility and a commitment to ethical behavior in all that we do helps us mitigate risk, reduce costs, protect our brand value, and develop new market opportunities.

We believe that technology will continue to play a fundamental role in addressing the world's toughest environmental and social challenges—from energy and water conservation and management to healthcare and education for all. Intel has an ambitious vision: Create and extend computing technology to connect and enrich the life of every person on

Earth. One of our strategic objectives, in particular, supports this vision: “Care for our people, care for the planet, and inspire the next generation.”

Care for our people. Intel's success relies on our employees' ability to create and innovate—in technology, in business, and in their communities. We invest significant resources in employee training and development, great place-to-work and diversity initiatives, and programs that empower employees to volunteer with local schools and nonprofit organizations. For example, through our Intel Involved program, our employees have donated more than 5 million hours of volunteer service around the world over the past five years. We measure our progress each year by soliciting employee feedback through our annual Organizational Health Survey; in our 2012 survey, 88% of employees reported that they are proud to work for Intel, up from 87% in 2011.

Care for the planet. We are committed to environmental leadership in our own operations, in our products, and across our supply chain. Since 2008, Intel has been the largest voluntary purchaser of “green” power in the U.S., according to the U.S. Environmental Protection Agency. Our investments in energy conservation from

2008 through 2012 have saved more than 1.2 billion kilowatt-hours of energy, equivalent to removing 126,000 U.S. homes from the electric grid. We estimate that energy-efficient Intel® technology will enable the billion PCs installed between 2007 and 2014 to consume half the energy and deliver 17 times the compute capacity of the first billion PCs and servers installed worldwide (between 1980 and 2007). We have also invested resources to improve the accountability and transparency of our suppliers, and have formally integrated environmental metrics in the scorecards we use in our supplier management and supplier recognition programs. Inspire the next generation. We believe that success in today's innovation economy depends on access to technology and quality education. Intel and the Intel Foundation invest approximately \$100 million annually in education programs around the world—from technology training for teachers to premier science fairs for students.

In 2012, we helped launch the Stay With It™ campaign to help connect engineering students with each other and with experienced engineers, role models, and influencers, and encourage them to stay with engineering as their field of study. We also partnered on the launch of the “Girl Rising” film and 10x10 social action campaign, which highlights the importance of investing in the education of girls and women to advance economic opportunity.

We strive for continuous improvement in our own business, and collaborate with other organizations to advance best practices in corporate responsibility worldwide. As a United Nations Global Compact LEAD member, we are committed to transparency in reporting about our corporate responsibility

performance and actions. We welcome your feedback on this report, prepared in accordance with the Global Reporting Initiative\* G3.1 Sustainability Reporting Guidelines.

I will retire in May 2013 after almost 40 years at the company. I am proud of the progress we have made in corporate responsibility during the eight years I have served as CEO. It has been an honor to work with the employees of Intel, who every day move technology forward, empower people, and transform our world in ways we had never imagined.

I have no doubt that their innovations and actions will continue to improve lives while sustaining our business—and the planet—in the years to come.

Paul S. Otellini

President and Chief Executive Officer

Intel Corporation
